Operational Risk

Qualitative Disclosures

The Bank has put in place important policies like Operational Risk Management, Information System Security, Know your Customer (KYC) and Anti Money Laundering (AML), Business Continuity and Disaster Recovery Management. The updated manuals on all important functional areas have been circulated to the branches. Risk Based Internal Audit is introduced in 200 branches in our Bank.

The Operational Risk Management Policy outlines the Organisation structure and covers the process of identification, assessment / measurement and control of various operational risks. Internal control mechanism is in place to control and minimize the operational risks.

Capital charge for operational risk is computed as per the Basic Indicator Approach. The average of the gross income, as defined in the New Capital Adequacy Framework guidelines, for the previous 3 years i.e 2010-11, 2009-10, 2008-09 is considered for computing the capital charge. The required capital is **Rs. 53.13 Cr.**

Table DF- 10

Interest Rate Risk in the Banking Book (IRRBB)

Quantitative Disclosures

- a) The increase (decline) in earnings and economic value (or relevant measure used by management) for upward and downward rate shocks according to management's method of measuring IRRBB, broken down by currency (where the turnover is more than 5% of the total turnover).
- (i) **Earnings at Risk** – For a parallel shift of 200 bps, fall of NII is at 3.92% of Net worth.
- (ii) **Market Value of Equity (MVE)**- A '200 bps shock' is adopted as the standardized interest rate shock for arriving the MVE under the standardized stress scenario. The market values of above portfolios are calculated with respect to the 'shifted yield curves'. The MVE under the standardized shock is calculated as the difference between 'MV of assets under stress' and 'MV of liabilities under stress'.

Accordingly Change in MVE is estimated to fall by Rs.Cr.227.15
