Disclosure Under Pillar III of Basel III Norms as on 31.03.2016

I. SCOPE OF APPLICATION AND CAPITAL ADEQUACY

Table DF-1: Scope of Application

Lakshmi Vilas Bank is a private sector bank incorporated in 1926 at Karur. The bank doesn't have any subsidiaries under its Management. Hence the CRAR is computed on standalone basis only.

Qualitative Disclosures:

List of group entities considered for consolidation.

List of group entities not considered for consolidation both under the accounting and regulatory scope of consolidation.

No Group affiliation

Quantitative Disclosures:

List of group entities considered for consolidation

Not applicable

The aggregate amount of capital deficiencies in all subsidiaries which are not included in the regulatory scope of consolidation i.e. that are deducted:

Not applicable

The aggregate amounts (e.g. current book value) of the bank's total interests in insurance entities, which are risk-weighted:

Not applicable

Any restrictions or impediments on transfer of funds or regulatory capital within the banking group:

Not applicable

Table DF-2 – Capital Adequacy

Qualitative Disclosures:

A summary discussion of the bank's approach for assessing the adequacy of its capital to support current and future activities.

The Bank is exposed to Credit risk, Market risk, Operational risk and other Pillar II risks. Based on the scale of business operations, the bank has put in place respective regulatory approaches to compute the required capital of the bank and also the controls that commensurate with the risk profile of the bank. The capital requirement for the estimated future business levels are assessed at periodic intervals. The bank has adopted the following approaches for computing the capital charge.

Credit Risk – Standardized Approach

Market Risk – Standardized duration Approach

Operational Risk – Basic Indicator Approach

- The Business projections, capital requirement, assessment methodology, controlling mechanism, etc., have been discussed in ICAAP document and it has been reviewed on yearly basis.
- CRAR has been computed based on the Basel III guidelines and it is well above the regulatory minimum level of 9.625% which includes the capital conservation buffer.

Quantitative Disclosures: (₹ in lakhs)

Particulars	No of Equity Shares	Face Value Per share	Amount
Authorized Capital	300000000	10	30000.00
Issued Capital	180969986	10	18097.00
Subscribed Capital	179461609	10	17946.16
Called up/paid up Capital	179461609	10	17946.16

The Bank's shares are listed on the National Stock Exchange Limited and Bombay Stock Exchange Limited.

As on 31.03.2016, the bank has not raised Capital in the form of additional Tier-I.

Tier 1 capital includes Equity share capital, Reserves comprising of statutory reserves, capital & other revenue reserves, share premium, Balance in profit & loss account, Revaluation reserves at a discount of 55% and Deferred tax assets to the extent permitted by RBI and less other intangible assets.

Tier 2 Capital consists of the general provision on standard assets, loan loss reserve, provision on NPA assets sold, investment fluctuation Reserve and Subordinated Bonds (discounted value)

Break up of capital funds:- **(₹ In lakhs)**

II. Risk Exposure and Assessment

General Qualitative Disclosure requirement:

Credit Risk:

The objectives of Credit risk management practices in the bank are the following: -

- To ensure business continuity with growth and stability.
- To ensure that the bank holds adequate capital in alignment with risks undertaken as well as the regulatory requirements from time to time.
- To optimize risk-return profile by providing a framework for risk-based pricing.
- To provide decision support for entry / exit strategies.
- To provide a framework for monitoring risk profile of the bank through structured reports.
- To facilitate the identification of risks in various activities undertaken by the bank through its operating units.
- To provide guidance on measurement of risks and their quantification for assessing the level of risk under portfolio management.
- To provide guidance on risk mitigation for ensuring customer retention while promoting risk-reward consciousness at all levels of operation.
- To set / monitor prudential risk limits in tune with the business strategy, capital adequacy and regulatory prescriptions.
- To ensure the adherence to these risk limits through defining the reporting structures and systems.
- To ensure compliance with other regulatory prescriptions.

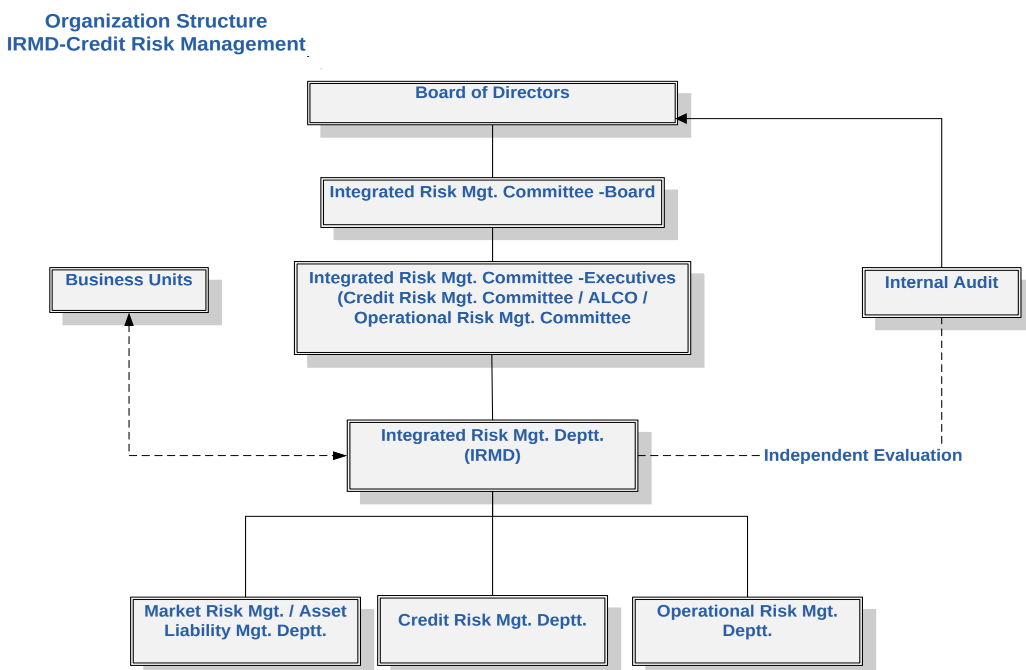
- The bank proposes to keep its overall risk profile as moderate and stable for the medium term.

Risk appetite and risk-return profile, credit risk strategy shall also include a statement of the banks willingness to grant credit based on:

- exposure type (for example, commercial, consumer, real estate,etc.,),
- economic sector (e.g. textile, iron etc.),
- geographical location,
- currency,
- maturity,
- anticipated profitability,
- identification of target markets / business sectors (like priority sector lending) and
- the overall credit portfolio composition
- preferred levels of diversification & concentration tolerances.

Credit risk strategy of the bank shall provide continuity in approach considering cyclical approach of the economy and the resulting shifts in the composition and quality of the overall credit portfolio. Strategy is being reviewed yearly in CRM policy.

Organization Structure:



Comprehensive Risk Management Policy put in place and the same has been approved by Board. The hierarchy of the IRMD starts from Board of Directors. Board is responsible for approving & reviewing on a periodical basis credit risk related policies, strategy & limits. Further Board has sub level committee (IRMCB) to review the risk limits, monitor the functioning of the IRMC-E and issue necessary directions if require.

The Scope and nature of risk reporting and / or measurement systems

Risk-rating model is an important tool and is an integral part of the Credit Risk Management. The benefits of a robust system based rating model

- ⇨ Serves as a **single point indicator of diverse risks** of a borrower
- ⇨ Enables banks to take **informed credit decisions** in a consistent manner.
- ⇨ Facilitates adoption of **risk-based pricing**.
- ⇨ Arriving at **Facility Risk rating** for the particular facility/product based on the comforts of securities/guarantors.

Internal credit rating models / systems are an important tool in monitoring the quality of individual credits, as well as the total portfolio. Bank has well-structured internal risk rating system which acts as a good means of differentiating the degree of credit risk in the different credit exposures of the bank. This will allow more accurate determination of the overall characteristics of the credit portfolio, concentrations, problem credits, and the adequacy of loan loss reserves.

Internal credit rating framework enables the Bank to standardize and uniformly communicate the “judgment” in credit selection procedures but is not a substitute to the vast lending experience accumulated by the bank’s professional staff.

In order to make the credit risk assessment more consistent and effective, a two dimensional approaches to measure risk comprising borrower risk (Obligor Rating) and transaction risk (Facility Rating) has been implemented.

Use of Risk Rating Models / Systems

- Individual credit selection, wherein a borrower or a particular exposure/ facility is rated.
- Pricing of the facility / loan
- Deciding the limits & tenure of the proposed credit assistance.
- Portfolio-level analysis and portfolio management
- Frequency and intensity of monitoring of the exposures.
- Internal MIS

- General provision “reasonable over provisioning” in addition to statutory prescribed provision.
- Assessing the aggregate risk profile of bank.

The Bank has a multi-tier structure for sanction of credit proposals, with proper delegation of lending powers at various levels of officers & executives, duly approved by Board.

The powers vested at each level depend on the quantum and type of the loan facility and the overall exposure to the borrower/group.

The Bank has a system under which the lending powers exercised by delegated authority are reported to and reviewed by a higher authority under the Internal Loan Review Mechanism.

A two dimensional approach to measure risk comprising borrower risk (Obligor Rating) and transaction risk (Facility Rating) has been implemented. The Credit Risk Assessment System (CRAS) operated through the risk rating models shall form the fulcrum of credit risk management.

Policies for hedging and / or mitigating risk and strategies and processes for monitoring the continuing effectiveness of hedges/mitigants

As per the RBI guidelines, eligible financial collaterals have been taken into account for risk mitigation purpose.

Bank is having a system in place to monitor compliance with country exposure limits. Exceptions are reported, approved and rectified as per laid down procedures.

Bank is having an effective system in place to generate management reports which are detailed enough for the senior management review and to identify exceptions in a timely manner.

Market Risk:

Strategies and processes

The Bank has policies like Asset Liability Management Policy, Investment & Forex Risk Management Policy to address the liquidity risk and market risk respectively arising out of its banking book and trading book of investment portfolio.

Mid office is functioning independent of treasury and it monitors limits, trigger of investments, cut (stop) loss limit, Open position limit etc., Further it assess various limits set out by RBI and as stipulated in Investment/ trading book Policy, and keeps track on rating migration of rated securities on a daily basis. It fixes the overall counter-party exposure limits (Banks & FIs)

The structure and organization of the relevant risk management function

The Asset Liability Committee (ALCO) is responsible for

- Managing Interest Rate Risk and Liquidity Risk of the Banking Books.
- Pricing of Assets and Liabilities.
- Monitor and control the quality of the Balance Sheet
- Review and control of limits, procedures, reports, ratios & market trends, which impact bank's Balance Sheet.
- Review the treasury operations including trading.
- Differential pricing of wholesale deposits be delegated to Planning & Development

The scope and nature of risk reporting and/or measurement systems

The ALM Policy will be operated through the Integrated Risk Management Department (IRMD) which is responsible for evolving appropriate systems & procedures for ongoing identification & analysis of Balance Sheet risks and laying down parameters for management of these risks. IRMD will, therefore, have the responsibilities of periodic monitoring and control of the risks and the same has been reported to IRMC-E & IRMC-B.

Policies for hedging and/or mitigating and strategies and processes for monitoring the continuing effectiveness of hedges/mitigants.

Board approved Investment and Forex policy are put in place. Policies for hedging/ mitigating risk and strategies and processes for monitoring the continuing effectiveness of hedges / mitigants are discussed in ALCO.

The Structural liquidity statement is prepared on a daily basis to analyze the liquidity profile of the bank in a static manner. Exchange risk is managed by fixing limits on position limits – Day light and Overnight limits, single deal limit, stop loss limit and Overall Overnight Open Exchange position limit. Additional liquidity ratios reviewed on a quarterly basis against the limits set under stock approach.

Interest rate risk is analyzed from earnings perspective using Traditional Gap analysis and Economic value perspective using Duration Gap analysis on a Quarterly basis.

Further stress testing process conducted under scenario as well as stock approach to estimate the impact on various conditions.

Operational Risk

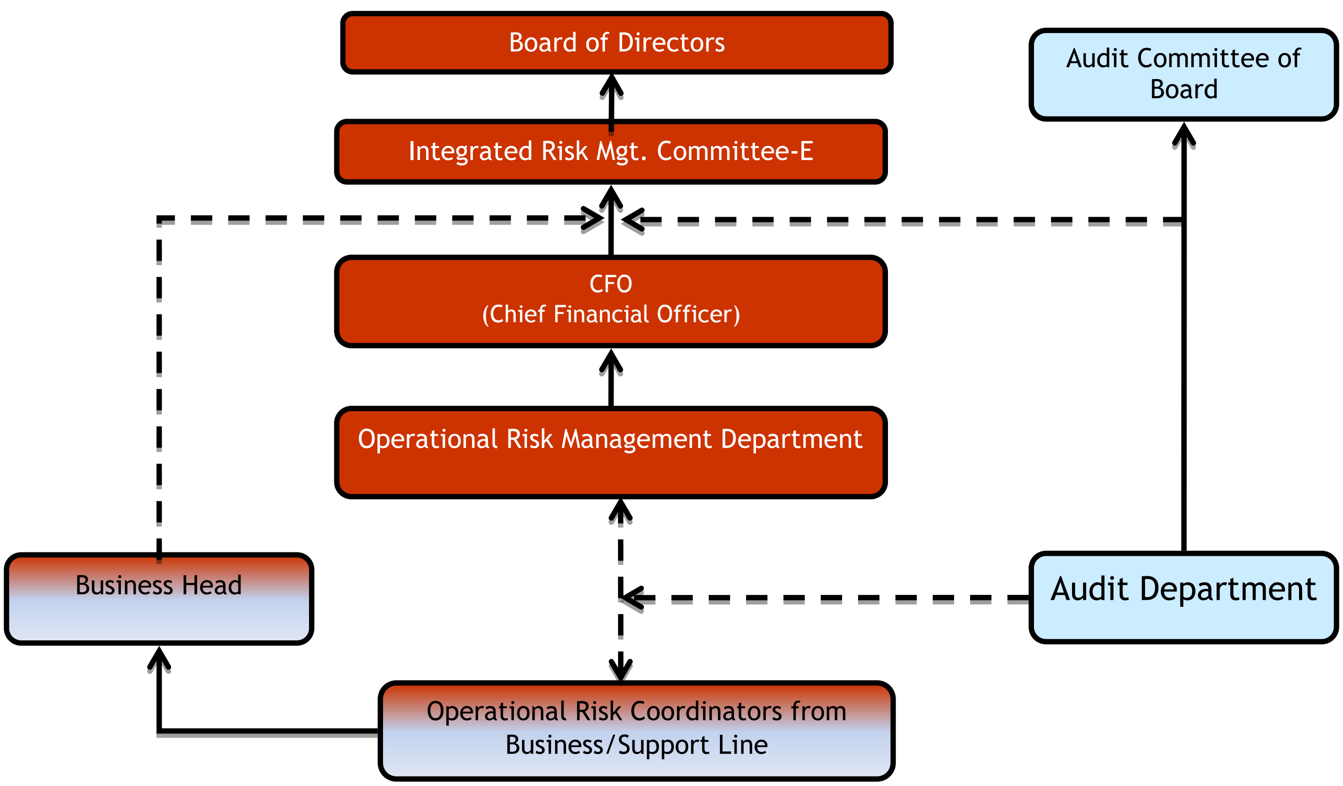
Strategies and processes

The strategy for the overall management of operational risk is in alignment with the business objectives & risk appetite of the bank considering the size, nature and complexities of the bank activities.

The strategy towards operational risk management shall focus on:

The Structure and organization of the relevant risk management function

Operational Risk Management is organized within the IRMD and will report to the head of the risk. The hierarchy of ORM within the organizational chart for governance purposes is presented below. These roles and responsibilities relate only to the activities relating to operational risk management.



A well-defined Operational risk Management policy is put in place. The role of Board vests in setting business strategy, risk appetite, policies, governance, management framework, methodology of measurement and assessment, internal audit, report to stakeholders on risk management, etc.,

The Scope and nature of risk reporting and/or measurement systems

The scope of risk reporting is to establish an explicit operational risk management process that results in the identification, evaluation, assessment, measurement, analysis, monitoring, control, mitigation and reporting of operational risks. This process also includes independent evaluation of operational risk management function by the Internal Audit Department and to report its findings to the Board / Senior Management as an assurance for the effective discharge of responsibilities with respect to management of operational risk.

Policies and procedures are put in place for control / mitigate material operational risks to adjust the risk appetite / tolerance level based on its risk control and mitigation strategies. For those risks that cannot be controlled, the bank decides whether to accept these risks, reduce the level of business activity involved, or withdraw from this activity completely. Some major control/mitigation techniques like sound internal control system, Insurance, Standards for Insurance Recognition, retention/self insurance, Business Continuity and Disaster Recovery Plan, Outsourcing of financial services, Information Technology security, Internal Audit, External Audit, Reporting are deployed in the framework.

Interest Rate Risk in Banking Book

Strategies and Processes

Interest Rate Risk is measured in two different ways. Earnings perspective using Traditional Gap Analysis is to assess the impact of adverse movement in interest rate on the Net Interest Income (Earnings at Risk) and economic value perspective using Duration Gap Analysis to assess the impact of adverse movement in interest rate on the market value of Bank's equity.

Structure and Organization of Risk Management Function

ALM policy will manage and monitor the limits / guidance values / target set on interest rate risk of the Banking Book. IRMC-B and ALCO at the executive level are responsible for efficient and effective management of Interest rate risk in Banks business.

Scope and nature of risk reporting / measurement systems

The Duration/ Modified duration mainly depends on coupon, maturity and periodicity of payment of installments. Since the modified duration of the liabilities is less compared to the modified duration of assets, there would be fall in the equity value under major stress. Modified duration of Equity is calculated on a quarterly basis. The capital charge for Interest rate risk in banking book is assessed based on drop in the Market value of equity under 200 bps changes in interest rate. The results of Traditional Gap analysis and Duration Gap analysis including the adherence to tolerance limit set in this regard are monitored and the same has been placed before ALCO/IRMC-B level.

Policies for hedging / mitigating risk and strategies and processes for monitoring the continuing effectiveness of hedges/ mitigants

Investment policy, Forex policy, ALM policy, Stress testing policy, Credit Risk Management Policy are put in place to measure, mitigate / hedge the various risks.

TABLE DF-3: Credit Risk

Credit Risk: General Disclosures

Qualitative Disclosures

(a) The general qualitative disclosure requirement with respect to credit risk, Includes the definitions of Past Due, NPA of a loan or a advance and impaired assets (For Accounting Purposes), Out of order and Overdue. These definitions are as per the extant guidelines of Reserve Bank of India.

Credit Risk

Credit risk in simple terms is the potential that bank’s borrower or counterparty will fail to meet its obligations in accordance with agreed terms.

Credit risk is defined as the possibility of losses associated with default in repayment or diminution in the credit quality of borrowers or counterparties or diminution in the value of primary and/or collateral assets. In a bank’s portfolio, losses stem from outright default due to inability or unwillingness of a customer or counterparty to meet commitments in relation to lending, trading, settlement and other financial transactions.

Discussion of the Bank’s Credit risk management policy

The Board level approved Credit Risk Management Policy is put in place. The goal of the policy is to ensure that it is within the acceptable risk appetite and tolerance limit set by the bank. It manages the credit risk inherent in the entire portfolio as well as the risk in individual credits or transactions and it encompasses identification, measurement, monitoring and control of the credit risk exposures. Further it deals the structure, governance, framework, and processes for effective and efficient management of the Credit risk.

Table DF- 5-Credit Risk: Credit Risk Mitigation: Disclosures for Standardized Approaches

Qualitative Disclosures

a) The general qualitative disclosure requirement with respect to credit risk mitigation including

Policies and process for and an indication of the extent to which the bank makes use of, on and off balance sheet netting;

- **Policies and processes for collateral valuation and management**

Bank has a policy and procedure for the management of collateral and guarantees.

Valuation should be based on the current market value of the collateral and should not be biased in order to enable the bank, to grant a higher credit limit to the borrower or improve its internal credit rating, make a smaller amount of provision or continue interest accrual for a problem credit.
Collateral should be revalued on a regular basis, though the frequency may vary with the type of collateral involved and the nature & the internal credit rating of the underlying credit e.g. frequency for shares and properties as collateral would be different.

Collaterals & guarantees are properly evaluated with respect to legal validity, enforceability in all relevant jurisdictions, etc., for the purpose of netting as credit risk mitigants as per the policy.

A more conservative approach should be adopted for valuing the collateral of problem credits because the forced-sale value, rather than the open market value, is likely to be closer to what eventually may be realized from an asset sale when the market conditions are un-favorable. Therefore, a discount to the estimated market value should be applied where appropriate.

- **Description of the main types of collateral taken by the bank**

Under Standardized approach, the following collateral instruments used as risk mitigants for the capital computation.

1. Cash and fixed deposits of the Borrower with the Bank.
2. Gold (The value of the gold arrived after notionally converting into 99.99% purity)
3. Securities issued by Central and State Governments.
4. Kisan Vikas Patra and National Savings Certificates (with no lock-in period)
5. Life insurance policies with a declared surrender value of an insurance company which is

regulated by an insurance sector regulator.

6. Debt Securities issued by Public Sector Entities and other entities (including banks and other primary dealers) rated by chosen rating agency attracting 100% risk weight or lesser risk weight.(i.e. rated atleast BBB(-) or A3 for short-term debt instruments)

7. Debt Securities not rated by a chosen Credit Rating Agency in respect of which banks should be sufficiently confident about the market liquidity where these are
   a) Issued by a bank
   b) Listed on a recognized stock exchange,
   c) Classified as senior debt and
   d) all the rated issues of the same senior by the issuing bank are rated atleast BBB (-) or A3 by a chosen Credit Rating Agency.
   e) The bank has no information to suggest that the issue justifies a rating below BBB (-) or A3 by a chosen Credit Rating Agency

8. Units of Mutual Funds regulated by the securities regulator of the jurisdiction of the Bank's operation and mutual funds where
   a. A price for the units is publicly quoted daily i.e. where the daily NAV is available in public domain
   b. Mutual fund is limited to investing in the permitted instruments listed.

- **Information about (market or credit) risk concentrations within the mitigation taken**

  Majority of the exposures are retail exposures and insulated with adequate liquid collateral by way of cash margin, KVP, fixed deposits, National Savings Certificate, Life Insurance Policies etc for reducing the capital buffer after applying applicable haircuts in the respective securities.

Quantitative Disclosures

a) For each separately disclosed credit risk portfolio the total exposure (after, where applicable, on –or off balance sheet netting) that is covered by eligible financial collateral after the application of haircuts.

Credit Risk exposure covered by Eligible Financial Collaterals

(**₹ in Lacs**)

Type of Exposure	Notional Exposure (After CCF)	Eligible Financial Collaterals	Net Exposure
On Balance Sheet	383388.76	420773.87	0.00
Off Balance Sheet	116635.93	31415.57	85220.36
Total	**500024.69**	**452189.44**	**85220..36**

b) For each separately disclosed portfolio the total exposure (after, where applicable, on- or off-balance sheet netting) that is covered by guarantees/credit derivatives (whenever specifically permitted by RBI)

NIL

Table DF-6

Securitization Exposure- Disclosure for Standardized Approach

Qualitative disclosures

General Disclosures on securitization exposures of the Bank

Objectives of Securitization activities of the Bank

Presently bank is having limited exposure towards securitization. Further bank will explore the possibilities of expanding the scope of lending activities through securitization process and with the objective of managing the portfolio risk, credit risk, interest rate risk, liquidity risk and capital adequacy.

Securitization Process

Bank has a AAA rated securitization exposure in banking book. Before entering into the securitization transaction, the bank will collect the information, which is nature from the originator. Further the information is historical in nature and such information will be useful to understand the repayment schedule, cash flows, principle and other charges, credit risk on underlying assets, etc.,

Monitoring Mechanism

Monitoring of the pooled assets effectively carried out by the Regional Office Level. Further the existence of assets or unit inspection for the loans under the securitization pool is verified on random basis before disbursement.

Bank’s Policy on Securitization

Bank will not enter into a securitization transaction with originator whose External rating is not below than A category. Further bank consider the external rating of the Originator as well as Securitized portfolio which is carried out by a third party with a view to assess credit quality of the pool.

Quantitative Disclosure – Banking Book

Total Amount of exposures securitized by the Bank	₹ 1290.48 lakhs
Losses recognized towards the exposure during the current period	………..
Amount of Assets intended to be securitized within a year	…………
Of which above, amount of assets originated within a year before securitization	…………

The securitized exposures in banking book are vehicle loans. The underlying assets are vehicles and further capital charges are computed by applying risk weight of 125% on the exposure (due to consumer loans)

Table DF- 7

Market risk in Trading Book

Qualitative disclosures

a) Approach for Computation of Capital charge for Market Risk

Standardized Duration Approach is used for calculating Capital charge for Market Risk. Components under Market risk are

a) Specific Risk – Capital Charge for market risk is computed based on risk weights prescribed by the regulator.

b) General Market Risk is calculated for

Securities under HFT category

Securities under AFS category

Open foreign exchange position limits

Trading Positions in Derivatives

The total Capital charge for market risk is equal to greater of Specific Capital charge plus General Market Risk Capital Charge or Alternative total capital charge.

Quantitative Disclosures

a) The capital requirements for:

- Interest rate risk ₹ 12064.49 lakhs
- Equity position risk ₹ 2038.05 lakhs
- Foreign exchange risk ₹ 190.79 lakhs

Table DF- 8- Operational Risk

The Bank has put in place important policies like Operational Risk Management, Information System Security, Know your Customer (KYC) and Anti Money Laundering (AML), Business Continuity and Disaster Recovery Management. The updated manuals on all important functional areas have been circulated to the branches. Risk Based Internal Audit is introduced in all branches in our Bank.

The Operational Risk Management Policy outlines the Organisation structure and covers the process of identification, assessment / measurement and control of various operational risks. Internal control mechanism is in place to control and minimize the operational risks.

Capital charge for operational risk is computed as per the Basic Indicator Approach. The average of the gross income, as defined in the New Capital Adequacy Framework guidelines, for the previous 3 years i.e., 2014-15, 2013-14, 2012-13 is considered for computing the capital charge. The required capital is **₹ 12013.86** lakhs.

Table DF -9: Interest Rate Risk in the Banking Book (IRRBB)

Interest Rate Risk in Banking Book (IRRBB) refers to the risk of loss in earnings and economic value of the Bank's Banking Book as a consequence of movement in interest rates. The Bank has significant portion of its assets and liabilities portfolio not marked to market and is carried on the books of the Bank at historical values. Thus, the economic value of such assets and liabilities is generally not ascertained on a regular basis and can be a significant source of risk if the asset or liability is not held till maturity.

IRRBB Earnings Perspective

The immediate impact of changes in interest rates in the market is on bank's earnings by changing the Net Interest Income (NII). The interest rate risk when viewed from this perspective is known as '**Earnings Perspective'**.

The asset liability profile up to 6 months is 'asset sensitive'. The positive mismatches in the near term time buckets (up to 6 months) will be beneficial to the bank if the interest rates increases in the economy.

Interest Rate Risk – Economic Value Perspective

The long-term impact of changes in interest rates in the economy will be on bank's Market Value of Equity (**MVE**) since the economic value of the bank's assets, liabilities and off-balance sheet positions get affected due to variations in market interest rates.

Duration Gap Analysis (DGA) for IRR management is a simple approach to measure the volatility of market value of equity (MVE) in response to the changes in interest rates in the economy.

Since the modified duration of the liabilities are less compared to the modified duration of assets, there would be a fall in the equity value under major stress. In order to bring down the percentage of fall in market value of equity and earnings at risk under major stress, we have been mobilizing term deposits with longer tenure i.e., 3-5 years and over 5 years. As longer the tenure of liabilities, higher will be the modified duration.

The level of IRRBB (Earnings Perspective & Economic Value Perspective) is being measured and monitored on a quarterly basis aiming at managing it within the limit over a period and minimizes the impact of interest rate movement on near term profitability.

Quantitative Disclosures

The impact is calculated for a parallel shift of 200 bps across all the time buckets. The increase in NII is at ` 2089.80 lakhs and there would be fall of EVE by ` 16412.48 lakhs.

Table DF-10:

General Disclosure for Exposures related to Counterparty Credit Risk

Counterparty exposures for other entities are assessed subject to exposure ceilings as per the policy of the bank. Capital for Counterparty Credit Risk exposure is assessed based on the Standardized approach.

Bank does not have bilateral netting. The Credit equivalent amount of the derivative exposure is assessed based on the Current Exposure method.

Credit Exposure as on 31.03.2016 (₹ in lakhs)

	Notional Amount	Gross Positive fair value of contracts	Potential Future Exposure	Total Credit Exposure
Forward Contracts	115908.97	1439.34	2318.18	3757.52

Table DF-11: Composition of Capital **(₹ in lakhs)**

Basel III common disclosure template to be used during the transition of regulatory adjustments (i.e. from April 1, 2013 to December 31, 2017)		
Common Equity Tier 1 capital: instruments and reserves		
1	Directly issued qualifying common share capital plus related stock surplus (share premium)	83682.05
2	Retained earnings	82507.09
3	Accumulated other comprehensive income (and other reserves)	
4	Directly issued capital subject to phase out from CET1 (only applicable to non-joint stock companies)	
	Public sector capital injections grandfathered until January 1, 2018	
5	Common share capital issued by subsidiaries and held by third parties (amount allowed in group CET1)	
6	**Common Equity Tier 1 capital before regulatory adjustments**	166189.14
Common Equity Tier 1 capital: regulatory adjustments		
7	Prudential valuation adjustments	
8	Goodwill (net of related tax liability)	
9	Intangibles other than mortgage-servicing rights (net of related tax liability)	9316.08
10	Deferred tax assets	
11	Cash-flow hedge reserve	
12	Shortfall of provisions to expected losses	
13	Securitisation gain on sale	
14	Gains and losses due to changes in own credit risk on fair valued liabilities	
15	Defined-benefit pension fund net assets	
16	Investments in own shares (if not already netted off paid-in capital on reported balance sheet)	
17	Reciprocal cross-holdings in common equity	13.86
18	Investments in the capital of banking, financial and insurance entities that are outside the scope of regulatory consolidation, net of eligible short positions, where the bank does not own more than 10% of the issued share capital (amount above 10% threshold)	

19	Significant investments in the common stock of banking, financial and insurance entities that are outside the scope of regulatory consolidation, net of eligible short positions (amount above 10% threshold)	
20	Mortgage servicing rights (amount above 10% threshold)	
21	Deferred tax assets arising from temporary differences (amount above 10% threshold, net of related tax liability)	
22	Amount exceeding the 15% threshold	
23	of which: significant investments in the common stock of financial entities	
24	of which: mortgage servicing rights	
25	of which: deferred tax assets arising from temporary differences	
26	National specific regulatory adjustments (26a+26b+26c+26d)	
26a	*of which:* Investments in the equity capital of the unconsolidated insurance subsidiaries	
26b	of which: Investments in the equity capital of unconsolidated non-financial subsidiaries	
26c	of which: Shortfall in the equity capital of majority owned financial entities which have not been consolidated with the bank	
26d	*of which:* Unamortized pension funds expenditures	
	Regulatory Adjustments Applied to Common Equity Tier 1 in respect of Amounts Subject to Pre-Basel III Treatment	
	of which: [INSERT TYPE OF ADJUSTMENT]	
	For example: filtering out of unrealized losses on AFS debt	
	securities (not relevant in Indian context)	
	of which: [INSERT TYPE OF ADJUSTMENT]	
	of which: [INSERT TYPE OF ADJUSTMENT]
